I. Pavement Management Plan Certification

The City of Newport Beach certifies that it has a Pavement Management Plan in conformance with the criteria stated in the Orange County Transportation Authority Ordinance No. 3. This ordinance requires that a Pavement Management Plan be in place and maintained to qualify for allocation of revenues generated from renewed Measure M (M2).

The plan was developed by City of Newport Beach* using PAVER, a pavement management system, conforming to American Society of Testing and Materials (ASTM) Standard D6433, and contains, at a minimum, the following elements:

- Inventory of MPAH and local routes reviewed and updated biennially. The last update of the inventory was completed on November, 2018 for Arterial (MPAH) streets and November, 2018 for local streets.
- Assessment of pavement condition for all routes in the system, updated biennially. The last field review of pavement condition was completed on November, 2018.
- Percentage of all sections of pavement needing:
 - Preventative Maintenance: 28.4%
 - Rehabilitation: 5.1%
 - Reconstruction: 1.5%
- Budget needs for Preventative Maintenance, Rehabilitation, and/or Reconstruction of deficient sections of pavement for:
 - Current biennial period \$25.0 million
 - Following biennial period \$5.5 million
- Funds budgeted or available for Preventative Maintenance, Rehabilitation, and/or Reconstruction:
 - Current biennial period \$11.4 million
 - Following biennial period \$11.4 million
- Backlog by year of unfunded pavement rehabilitation, restoration, and reconstruction needs.
- The Pavement Management Plan is consistent with countywide pavement condition assessment standards as described in the OCTA Countywide Pavement Management Plan Guidelines adopted by the OCTA Board of Directors.

*An electronic copy of the Pavement Management Plan (with Micro Paver or StreetSaver compatible files) has been, or will be, submitted with the certification statement.

A copy of this certification is being provided to the Orange County Transportation Authority.

II. Executive Summary

NCE was selected by the City of Newport Beach to perform an update of the City's Pavement Management Program (PMP). The goal of this project is to update the PMP with current pavement conditions and to perform funding analyses to help inform and educate policy makers as well as to comply with the Orange County Transportation Authority's (OCTA) Measure M2 Program.

The 2019 PMP update includes an assessment of the entire MPAH pavement network via walking inspection method; local pavement network within Council Districts 1, 2, and 3 was also inspected via windshield inspection method. The assessment was completed in November of 2018 and result shows that the City's overall weighted PCI for the pavement network is 82, which is in the "Good" category. This is a one-point decrease from 2017. As a result, the City remains eligible for local agency match reduction of 10% per OCTA's requirement.

After the database was updated with maintenance activities that had occurred since 2017, pavement treatment policies were reviewed and unit costs were updated. Two budget scenarios were run and the result shows that the City's current annual funding level of \$5.7 million is efficient to maintain the current PCI at 82 by the end of the seven-year analysis period. Furthermore, it would take approximately \$6.0 million per year to increase the network PCI to 83.

III. Background (Optional)

The City of Newport Beach owns and maintains approximately 205.7 centerline miles of pavements, which includes 49.0 miles of the Master Plan of Arterial Highways (MPAH) streets and 156.7 miles of local streets, representing a total replacement cost of \$411.5 million.

IV. Current Pavement Conditions (PCI)

Current Network PCI	Current MPAH PCI	Current Local PCI
82	81	82

V. Projected Pavement Conditions (PCI)

Should be by projected PCI by year under existing or expected funding levels for next seven fiscal years (“Today” is before June 30).

Fiscal Year	Current Funding (\$ million)	Entire Network PCI	MPAH	Local
Today	\$5.7 million	82	81	82
2019-20	\$5.7 million	82	83	82
2020-21	\$5.7 million	83	84	82
2021-22	\$5.7 million	83	83	82
2022-23	\$5.7 million	83	83	83
2023-24	\$5.7 million	83	81	83
2024-25	\$5.7 million	83	81	83
2025-26	\$5.7 million	82	81	83

VI. Alternative Funding Levels

Maintain Existing Average Network PCI

Fiscal Year	Funding Needed (\$ million)	Entire Network PCI	MPAH	Local
Today	\$5.7 million	82	81	82
2019-20	\$5.7 million	82	83	82
2020-21	\$5.7 million	83	84	82
2021-22	\$5.7 million	83	83	82
2022-23	\$5.7 million	83	83	83
2023-24	\$5.7 million	83	81	83
2024-25	\$5.7 million	83	81	83
2025-26	\$5.7 million	82	81	83

Improve Average Network PCI

Fiscal Year	Funding Needed (\$ million)	Entire Network PCI	MPAH	Local
Today	\$6.0 million	82	81	82
2019-20	\$6.0 million	83	83	82
2020-21	\$6.0 million	83	84	82
2021-22	\$6.0 million	83	83	83
2022-23	\$6.0 million	83	83	83
2023-24	\$6.0 million	83	82	83
2024-25	\$6.0 million	83	82	84
2025-26	\$6.0 million	83	81	84

VII. Current and Projected Backlog by Year of Pavement Maintenance Needs

Fiscal Year	Current Funding Backlog (\$ million)	Maintain PCI Backlog (\$ million)	Increase PCI Backlog (\$ million)
Today	23.9	23.9	23.9
2019-20	17.6	17.6	17.3
2020-21	14.5	14.5	13.9
2021-22	12.9	12.9	12.5
2022-23	11	11	10.6
2023-24	7.4	7.4	7.4
2024-25	6.5	6.5	6.5
2025-26	4.9	4.9	4.9

VIII. Centerline Mileage

Entire Pavement Network	MPAH	Local Roads
205.7	49.0	156.7

IX. Percentage of Network in Each of Five Condition Categories Based on Centerline Miles

Condition Category	PCI Range	Network	Percent Area of Total Pavement	Area of Pavement (sf)	Percent Centerline Mileage of Network	Centerline Mileage of Network
Very Good	86-100	MPAH	17.0%	7,893,541	48.8%	23.0
		Local	29.0%	13,492,344		77.4
Good	75-85	MPAH	9.6%	4,479,118	26.9%	9.6
		Local	18.2%	8,460,903		45.8
Fair	60-74	MPAH	10.3%	4,800,026	17.0%	11.8
		Local	9.3%	4,320,157		23.2
Poor	41-59	MPAH	2.5%	1,150,878	4.9%	4.1
		Local	2.3%	1,094,709		5.9
Very Poor	0-40	MPAH	0.3%	125,980	2.4%	0.5
		Local	1.5%	686,559		4.4

X. Reduction in M2 Local Match

A local agency match reduction of 10% of the eligible cost for projects submitted for consideration of funding through the M2 Comprehensive Transportation Funding Programs (CTFP) call for projects is available if the local agency either:

- a. Shows measurable improvement of paved road conditions during the previous reporting period defined as an overall weighted (by area) average system improvement of one Pavement Condition Index (PCI) point with no reduction in the overall weighted (by area) average PCI in the Master Plan of Arterial Highways (MPAH) or local street categories;

or

- b. Have road pavement conditions during the previous reporting period, within the highest 20% of the scale for road pavement conditions in conformance with OCTA Ordinance No. 3, defined as a PCI of 75 or higher, otherwise defined as in "good condition".

If applicable, please use the space below to justify the local agency's eligibility for a reduction in M2 Local Match based on the statement above.

The City of Newport Beach has met the criteria above by having an average weighted PCI of 82. This means the City continues to remain eligible for reduction in M2 local match requirement.

XI. Appendix A – Seven-Year Road Maintenance and Rehabilitation Plan Based on Current *or* Expected Funding Level

The seven-year plan for road maintenance and rehabilitation should be based on current and projected budget. Street sections selected for treatment should be identified here. Specific data to be submitted should follow the format below:

MPAH								
Street Name	Limits of Work		Length of Segment	Width of Segment	Pavement Area	Type of Treatment	Cost of Treatment	Year of Treatment
	From	To						

LOCAL								
Street Name	Limits of Work		Length of Segment	Width of Segment	Pavement Area	Type of Treatment	Cost of Treatment	Year of Treatment
	From	To						

Please attach the seven-year road maintenance and rehabilitation plan, following the above template, after this sheet. The plan should be labeled Appendix A.

XII. Appendix B – Complete Street Listing Current Conditions

A complete street listing of current pavement conditions should be included in this report. Specific data to be submitted should follow the format below:

MPAH						
Street Name	From	To	Width of Segment	Area	Current PCI	Most Recent Inspection Date

LOCAL						
Street Name	From	To	Width of Segment	Area	Current PCI	Most Recent Inspection Date

Please attach the complete street listing, following the above template, after this sheet. The pages should be labeled Appendix B.

XIII. Appendix C – Quality Assurance/Quality Control Plan

Introduction

When performing data collection in any field, the need for quality control is paramount as it is essential for accurate planning, analysis and design. This is particularly true for collecting pavement distress data for a pavement management system.

The Quality Assurance/Quality Control (QA/QC) Plan establishes minimum quality standards for performance and procedures for updates of the pavement management system.

If applicable, utilize the space below to include information on the agency's QA/QC policies:

Appendix A - Resumes of Field Inspectors

1. Introduction

When performing data collection in any field, the need for quality control is paramount. This need for quality data is essential for accurate planning, analysis and design. NCE's "Quality Assurance Management Plan" (QAMP) affirms that:

"NCE is dedicated to achieving technical and management excellence and to delivering professional engineering and environmental services that meet or exceed our clients' needs. NCE's Quality Assurance/Quality Control (QA/QC) Program is designed to achieve these goals. This QA Management Plan (QAMP) describes NCE's QA Program, which is based on four principles: client satisfaction, employee participation, problem prevention, and continuous quality improvements."

NCE's QAMP establishes minimum quality standards for performance and procedures for assuring that our clients receive quality service. It requires the participation of employees at every level. It encourages Project Managers and technical staff to take pride in their work and responsibility for ensuring that the work is done correctly the first time. The program is designed to reduce the incidence of problems related to quality and results in implementation, where necessary, of corrective actions and modification of work procedures to minimize the incidence of future problems.

NCE has also prepared detailed and specific Quality Control Plans for projects, and the most notable example is for the **Long Term Pavement Performance (LTPP) – Western Regional Support Contract** for the Federal Highway Administration. This is a 150 page document that covers data collection on highways, including deflection, profile, pavement distresses, traffic, maintenance and rehabilitation history, materials testing and sampling as well as a document control.

1.1. Objectives

This document constitutes a formal Quality Control Plan (QCP) for the City of Newport Beach. The focus is on data collection issues as part of the pavement management update.

Specifically, it is intended for the 2019 Pavement Management Plan Update. The focus is on the collection of network-level pavement distress data (defined by NCHRP Synthesis 401 *Quality Management of Pavement Data Collection*, as "Network-level data collection involves collection of large quantities of pavement condition data, which is often converted to individual condition indices or aggregated into composite condition indices.")

1.2. Structure

The following components are addressed in this QCP:

- Condition inspection procedures used
- Accuracy required for data collection
- Inspector qualifications and experience
- Safety

2. Quality Control Plan

2.1. Condition Inspection Procedures

The governing document in performing condition inspections for the City of Newport Beach is ASTM D6433-16 “*Standard Practice for Roads and Parking Lots Pavement Condition Index (PCI) Surveys.*” Both asphalt concrete (AC) and Portland cement concrete (PCC) pavements are included in this protocol. The following distresses are collected for each pavement type.

Asphalt Concrete (AC) Pavements

1. Alligator (fatigue) cracking
2. Bleeding
3. Block cracking
4. Bumps and sags
5. Corrugation
6. Depression
7. Edge cracking
8. Joint reflection cracking
9. Lane/Shoulder drop off
10. Longitudinal and transverse cracking
11. Patching and utility cut patching
12. Polished aggregate
13. Potholes
14. Railroad crossing
15. Rutting
16. Shoving
17. Slippage cracking
18. Swell
19. Weathering
20. Raveling

Portland Cement Concrete (Jointed)

1. Blowup/Buckling
2. Corner breaks
3. Divided slab
4. Durability (“D”) cracking
5. Faulting
6. Joint seal damage
7. Lane/shoulder drop off
8. Linear cracking
9. Patching (large) and utility cuts
10. Patching (small)
11. Polished aggregate
12. Popouts
13. Pumping
14. Punchout
15. Railroad crossing
16. Scaling, map cracking and crazing
17. Shrinkage cracks
18. Spalling (corner)
19. Spalling (joint)

Any exceptions to the above procedures will be discussed with the City before any inspections are performed. These are usually related to distresses or situations that are not covered in the manuals. Examples include slippage cracks, roller check marks or edge cracking on streets with no curbs and gutters. Others include the use of seals or open-graded asphalt concrete mixes. Any modifications will be documented and submitted to the City for approval.

All distress or condition inspections are performed as walking inspections, and a minimum 10% sampling rate is utilized. Field crews are typically composed of a one-person crew teaming up when required for higher volume facilities such as arterials. The sample units for this project will be based upon the length and width of the street sections. This data will be collected to match the existing management sections of PAVER®.

2.2. Accuracy Required For Data Collection

The accuracy required for data collection has two components, both of which are further described in the following paragraphs.

- Re-inspections
- PCI comparisons with past inspections

2.2.1 Re-Inspection “Check”

At least five percent of all inspections are randomly re-inspected by other team members. A different inspector will review these sites and determine the revised pavement distress measurements. If the initial inspection is determined to be inaccurate, the original inspector is given refresher training before being allowed to continue with any further inspections. Should the data be inaccurate for a certain day, all the data for that day will be re-inspected following refresher training to ensure accuracy.

Acceptability Criteria

At the time of re-inspection, the actual distresses will be re-inspected and verified, and any corrections made, if necessary. Distress types and severities must be the same and re-measured quantities within $\pm 10\%$ of the original measured quantity.

If corrections are required on more than 10% of the re-inspected sample units, then an additional 5% will be re-inspected. This will continue until more than 95% of the re-inspected sections meet the acceptability criteria.

2.2.2 PCI Comparison with Past Inspections

As another level of quality control, the new PCIs are compared with the previous PCIs. If they differ by more than ± 10 PCI points, these sections are automatically flagged for further investigation.

If PCI Increases 10 points:

The section is investigated to see if a maintenance and rehabilitation event has occurred since the last inspection, but which has not been recorded. This can only be resolved with feedback from the City. Typically, it may include activities such as:

- Crack sealing activities – changes medium or high severity cracking to low severity
- Patching activities - alligator cracking that has been removed and patched, so that the resultant PCI is increased.
- Surface seals
- Overlay

Therefore, an up-to-date maintenance and rehabilitation history file in the PAVER[®] database is desirable, both for historical accuracy as well as to provide additional quality control.

If PCI Decreases 10 points:

The section is checked to see if the average deterioration rate (usually 3 to 4 points per year) is exceeded. If the drop in PCI is within the range of what is acceptable, no further action is required. If the drop is more than the acceptable range, a re-inspection will be performed. The default performance curves in the pavement management software form the basis for what is acceptable.

2.3. Inspectors' Qualifications and Experience

All NCE's inspectors are required to attend formal training on condition distress inspections. For example, any of the NCE inspectors working on the LTPP project are required to attend a week-long training workshop every year to maintain their certifications.

The Orange County Transportation Agency (OCTA) prequalifies pavement inspectors for work within the County of Orange. This prequalification covers the distresses associated with the ASTM D6433 test method by assessing each inspector's knowledge of the distresses, severity levels and how to quantify each distress. Each inspector must renew their prequalification every two years.

The Metropolitan Transportation Commission (MTC), requires all inspectors working on pavement management projects funding by MTC to be certified every two years. Each inspector must attend the distress training class provided by MTC. Then they are required to undergo field testing on their knowledge and complete an online test.

Finally, NCE conducts a one-day training and calibration workshop for all NCE staff involved with data collections. This is conducted once a year. The following table lists the inspectors to be assigned to this project, when their last training was and who conducted it.

Inspector Name	Date of Training	Training Conducted by:
Franc Escobedo	November 1, 2018	Lisa K. Senn
Meiling Cai	November 1, 2018	Lisa K. Senn

Resumes of technicians utilized on this project are included in Appendix A.

3. Safety Procedures

NCE administers a health and safety program in compliance with the Nevada Occupational Safety and Health Act (Section 618.383) and Cal OSHA Title VIII, Section 3203. The program is documented in NCE's *Workplace Safety Program Manual*.

Generally, the safety procedures include:

- Inspectors to wear a Class 2 safety vest at all times;
- Flashing beacon on all vehicles utilized for inspections; and
- Stopped vehicles to be parked at locations away from moving traffic (e.g. nearby parking, shoulders etc.).

On streets where there is a high volume of traffic or high speeds, additional measures may be necessary, such as:

- Inspections to occur during off-peak periods or on weekends;
- Additional inspector to watch out for traffic; and
- Traffic flaggers in extreme cases.

In extreme cases where it is not possible to walk on the pavement surface, inspections will be performed from sidewalks or raised medians. However, this is extremely rare for city or county roads/streets; this is most often encountered on state highways, and lane closures are the most likely option at this point.

All NCE inspectors are required to annually update their online safety programs as administered by "Click Safety". Class Taken are:

- C2 Cal PPE
- C2 Workzone Traffic Control
- C2 Workzone Traffic Safety Tips
- G2 Cal/OSHA Heat Illness

Appendix A

Resumes of Field Inspectors

Franc Escobedo

Engineering Field Technician

Franc has over 15 years of experience as a pavement management technician for NCE. He has performed numerous pavement condition inspections throughout California, Idaho and Washington. His experience includes distress collection across various Pavement Management Systems, including the Metropolitan Transportation Commission StreetSaver, PAVER, Cartegraph, and Hansen systems.

Additionally, Franc has completed both the OCTA PAVER and MTC “Distress Identification” courses for both Asphalt Concrete and Portland Cement Pavements and now assists with the training of agency staff on both courses.

Franc performs all activities relating to pavement data collection using hardcopy forms or tablets. As part of the quality control process, he performs cross-checks of data in the PMS database. He regularly performs quality control checks of field collected data and pavement maintenance history to ensure that PMS databases are accurate and up-to-date. During this process, he generates detailed reports that are necessary to perform his cross-checks of the collected data.

His field experience and expertise are added benefits to agencies during field training. Listed below are a collection of agencies for which Mr. Escobedo has performed condition inspections – they total over 6,000 centerline miles of roads and streets.

Representative Projects

Pavement Management

Pavement Management Inspections

Engineering Field Technician

 Ada County, Idaho	 Hayward	 San Diego County
 Agoura Hills	 Hillsborough	 San Ramon
 Anaheim	 Humboldt County	 Santa Cruz County
 Bakersfield	 Inyo County	 Seal Beach
 Bell	 La Habra	 Siskiyou County
 Buena Park	 Lake Forest	 South Lake Tahoe
 Camarillo	 Lemon Grove	 Stanislaus County
 Chula Vista	 Marin County	 Stanton
 Commerce	 Martinez	 Thousand Oaks
 Corona	 Mendocino County	 Torrance
 Cudahy	 Milpitas	 Tulare
 Dana Point	 Mission Viejo	 Tuolumne County
 El Centro	 Mono County	 Tustin
 El Cerrito	 Mountain View	 Vallejo
 Elk Grove	 Orange County	 Vernon
 Encinitas	 Palm Springs	 Walnut Creek
 Fremont	 Redwood City	 West Covina
 Fullerton	 San Clemente	 West Sacramento

Projects included various forms of inspections for pavement distress data collection, such as walking, windshield, and/or semi-automated.

Meiling Cai, EIT

Staff Engineer

Meiling joined NCE upon graduation and has since performed pavement condition inspections throughout California and Idaho, as well as sidewalk and curb ramp assessments. Her experience includes distress collection across various pavement management systems.

Representative Projects

Citywide Sidewalk Assessment

City of Carson, CA

Field Technician. NCE inspected sidewalks and curb and gutter distresses on approximately 203 centerline miles of streets using distress criteria developed in consultation with the City. The primary emphasis of the assessment was to identify tripping hazards resulting from damage to sidewalks, curbs and gutters, as well as to identify locations with previous repairs. Locations where the sidewalk stopped or was discontinuous were noted. This assessment included reviewing ADA compliance for the curb ramps.

Sidewalk & Curb Ramp Assessment

City of Corona, CA

Field Technician. NCE performed condition assessments of approximately 350 centerline miles of sidewalks and 9,000 curb ramps. In addition, NCE provided prioritization criteria as well as repair recommendations.

Pavement Management System and Update

City of Whittier, CA

Field Technician. NCE provided the PMP implementation of 195 centerline miles. NCE converted old pavement inventory into the StreetSaver[®] database; reviewed the inventory data; performed condition inspections; PCI calculation; imported M&R history records; reviewed M&R strategies and costs; determined the funding needs of the road network; calculated of multiple funding scenarios, linked the database to GIS, performed City staff training and provided technical support.

Pavement Management Plan Updates

City of La Habra, CA

Field Technician. NCE provided a comprehensive pavement condition inspection of the City's streets and alleys to prepare the 2015 update report to the Orange County Transportation Authority. Updates included the Pavement Condition Index, treatment, unit costs and cost of all segments of the City's streets.

Pavement Management Plan Updates

City of Manhattan Beach, CA

Field Technician. NCE updated the City's Pavement Management Program, including inspection/evaluation of approximately 120 centerline miles of paved streets, review and recommendation of revisions to the current pavement management strategies and costs, as well as the preparation of a final Pavement Management Program report.

Pavement Management Plan Updates

City of El Centro, CA

Field Technician. NCE developed the City's Pavement Management System, including detailed inspection and evaluation of the City's streets and

recommendations for maintenance methodologies and pavement treatment options.

Pavement Condition Inspection and Maintenance

City of Davis, CA

Field Technician. NCE is providing inventory verification, pavement condition inspections, sidewalk assessments, review and evaluation of maintenance and rehabilitation decision strategies, budgetary analyses, GIS integration and staff training for the University' pavement management program update.

Pavement Condition Inspection and Maintenance

Ada County Highway District, ID

Field Technician. NCE performed field pavement condition inspections on all the arterial and collectors (approximately 600 miles), as well as approximately 1,000 miles of residential streets. These were walking inspections as per the StreetSaver® protocols. NCE updated the StreetSaver® database with the distress data collected, calculated the pavement condition index and provided training on the StreetSaver® program, as well as a discussion of maintenance and rehabilitation treatments for County staff.

FY 2015-2016 Annual Overlay and Slurry Seal Project

City of Santa Clarita, CA

Field Technician. The project involved pavement reconstruction and resurfacing of 67 City arterial, collector and residential streets and two bike trails. The scope of work included site evaluation, FWD and coring (rehabilitation and close call preventative streets only), field surveys for design, detailed street design, utility coordination, design development meetings, PS&E and bidding and construction support services.

XIV. Appendix D – Pavement Management Data Files

The Pavement Management data files shall be submitted to OCTA in spreadsheet format. This must include the following information:

- Street name and limits for all public streets
- Street identifiers (Branch ID, Section ID)
- Direction (if applicable)
- Beginning and ending of each section
- Length, widths, and true areas
- Functional Classification (MPAH, Local)
- Number of travel lanes
- PCI and date of inspection
- Type of recommended treatment
- Cost of recommended treatment

The Pavement Management data files are attached here as a CD, or included as Appendix D

XV. Appendix E – GIS Maps – Current Conditions (Optional)

If included, attach and label Appendix E.
