

Public Works Department/Municipal Operations Division

TREE INSPECTION REPORT

Name: Landscape Division

Location(s) of tree(s): Marine Avenue, various locations

Request: Staff recommends that PB&R Commission consider the replacement of ten (10) Special City Gum trees located along Marine Avenue, Balboa Island.

Botanical/Common Names:

210 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

220 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

224 Marine Ave. - Eucalyptus rudis / Desert Gum

300 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

312 Marine Ave. - Eucalyptus rudis / Desert Gum

326B Marine Ave. - Eucalyptus rudis / Desert Gum

319 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

315 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

301 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

217 Marine Ave. - Corymbia citriodora / Lemon-Scented Gum

Designated Street Tree: N/A

Total Estimated Value: \$31,940

Damage: Lifting of curbs, gutters, sidewalks, and streets.

Parkway: (X) Concrete Brick Turf Other

Comments:

The following Special Gum trees are in poor condition and/or have significant defects in the canopy and in the root system and trunk.

- **210 Marine Ave.** - Asymmetrical, co-dominant limbs, dieback, contact growth, suspected heartwood decay.
- **220 Marine Ave.** - Asymmetrical, moderate decline, deadwood, Heartwood decay, visible root decay
- **224 Marine Ave.** - Asymmetrical, co-dominant limbs, deadwood, significant leaning trunk, suspected heartwood decay, and heaving sidewalk/root plate.
- **300 Marine Ave.** - 20% Live Crown Ratio, deadwood, history of limb failures, cavity in trunk, roots pruned, and heaving sidewalk.
- **312 Marine Ave.** - Asymmetrical, poor overall health, significant leaning trunk, suspected heartwood decay, root pruning for sidewalk work.
- **326B Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, poor overall health, and significant leaning trunk
- **319 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, significant leaning trunk, root pruned/decayed, and heaving sidewalk.
- **315 Marine Ave.** - Dead tree.
- **301 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, deadwood, history of limb failures, Heartwood decay suspected, roots pruned/decayed, and heaving sidewalk.
- **217 Marine Ave.** - 15% Live Crown Ratio, weakly attached, co-dominant limbs (past topping), poor overall health, cut and decayed roots.

The City has taken measures to treat the Special trees and mitigate risk in the past regarding all the Special Gum trees on Marine Avenue. These measures include, but are not limited to:

- Minor root pruning and shaving to accommodate hardscape repairs.
- Ramping with asphalt patches. Repeated grinding of lifting sidewalks.
- Deferred maintenance.
- Annual trimming and inspection.
- Review by Consulting Arborists
- Treatments of diseases and insects (Lerp Psyllid and Tortoise Beetle).
- Supplemental irrigation and nutrition via water truck.

At this time, The City Arborist recommends replacement of the above ten (10) Gum trees identified, as further mitigation is impractical and will not reasonably improve the condition or risks associated with these trees. Furthermore, the City Arborist recommends seventeen (17) "High-Risk" Gum trees be evaluated over the next three (3) years, which may include additional treatment/mitigation and/or Level 3 Tree Risk Assessments.

The City will be replacing these trees, along with five other vacant tree wells, with a mix of Gum species, including Lemon-Scented Gum and Silver-Dollar Gum. The City will search for replacements up to a 36-inch box sized tree, as the smaller box-sized trees will better acclimate to their new environment.

Inspected by: _____

Kevin Pekar, Landscape Manager/City Arborist

Date: August 22, 2019

Recommendation: Staff recommends the replacement of ten (10) Special City Gum trees located along Marine Avenue, Balboa Island with up to 36-inch box Gum trees (of mixed species). Additionally five vacant tree wells will be replaced with Gum trees.

TO: Deputy Public Works Director, Municipal Operations Division

FROM: City Arborist/Landscape Manager

SUBJECT: *Tree Removal Review – Potential Liability*

PROPERTY OWNER(S) / REQUESTER INFORMATION:

Name: City of Newport Beach

Tree Location: Marine Ave., various locations

Staff recommends that PB&R Commission consider the replacement of ten (10) Special City Gum trees located along Marine Avenue, Balboa Island.

The following Special Gum trees are in poor condition and/or have significant defects in the canopy and in the root system and trunk:

- **210 Marine Ave.** - Asymmetrical, co-dominant limbs, dieback, contact growth, suspected heartwood decay.
- **220 Marine Ave.** - Asymmetrical, moderate decline, deadwood, Heartwood decay, visible root decay
- **224 Marine Ave.** - Asymmetrical, co-dominant limbs, deadwood, significant leaning trunk, suspected heartwood decay, and heaving sidewalk/root plate.
- **300 Marine Ave.** - 20% Live Crown Ratio, deadwood, history of limb failures, cavity in trunk, roots pruned, and heaving sidewalk.
- **312 Marine Ave.** - Asymmetrical, poor overall health, significant leaning trunk, suspected heartwood decay, root pruning for sidewalk work.
- **326B Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, poor overall health, and significant leaning trunk
- **319 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, significant leaning trunk, root pruned/decayed, and heaving sidewalk.
- **315 Marine Ave.** - Dead tree.
- **301 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, deadwood, history of limb failures, Heartwood decay suspected, roots pruned/decayed, and heaving sidewalk.
- **217 Marine Ave.** - 15% Live Crown Ratio, weakly attached, co-dominant limbs (past topping), poor overall health, cut and decayed roots

The City has taken measures to treat the Special trees and mitigate risk in the past regarding all the Special Gum trees on Marine Avenue. These measures include, but are not limited to:

- Minor root pruning and shaving to accommodate hardscape repairs.
- Ramping with asphalt patches. Repeated grinding of lifting sidewalks.
- Deferred maintenance.
- Annual trimming and inspection.
- Review by Consulting Arborists
- Treatments of diseases and insects (Lerp Psyllid and Tortoise Beetle).
- Supplemental irrigation and nutrition via water truck.

At this time, The City Arborist recommends replacement of the ten (10) Gum trees identified, as further mitigation is impractical and will not reasonably improve the condition or risks associated with these trees. Furthermore, the City Arborist recommends seventeen (17) "High-Risk" Gum trees be evaluated over the next three (3) years, which may include additional treatment/mitigation and/or Level 3 Tree Risk Assessments.

The City will be replacing these trees, along with five other vacant tree wells, with a mix of Gum species, including Lemon-Scented Gum and Silver-Dollar Gum. The City will search for replacements up to a 36-inch box sized tree, as the smaller box-sized trees will better acclimate to their new environment.

REPLACEMENT TREE(S): √ YES NO

DESIGNATED TREE(S): Replacements with mixed species of Gum trees.

DEPUTY PUBLIC WORKS DIRECTOR – COMMENTS / RECOMMENDATIONS:

Signature: M. C. M. C.

Date: 8-23-19

Introduction (Page 1): 39 trees in confined wells impacting surrounding sidewalk, curb and street. Being evaluated for health and stability.

Species Descriptions (Page 2): Lemon-Scented Gum “canopy is made up of high arching branches with sparse foliage at the tips giving the tree an open airy crown”

Page 7: Timeframe applied to estimated likelihood of failure is 36 months – allows us to take removals on in a triage type of manner (below) - worst first and so on. This is also better in terms of Urban Forestry Management (i.e. trees in different age classes).

Site Factors (Page 10): most trees displayed fair health. ***“Tree stability is separate from tree health”*** – this is often misinterpreted and is why our independent risk assessment has helped identify those in highest risk.

- 4 X 6-ft. tree wells (at the time) covered with synthetic turf
- Sidewalk washed regularly creating trapped moisture promoting likely decay.
- Past concrete repairs – unhealed wounds with likely decay and a reduced root system.
- Lifting/heaving sections of concrete (i.e. tree near the Starbucks)

Live Crown Ratio (LCR) and Crown Symmetry (Page 13-14):

- Many trees with a low LCR (less than 30%), which increases likelihood of failure when exposed to high winds, such as “Santa Anas”. Tall trees with low LCR’s and restricted growing conditions are more prone to failure.
- Trees that lean, have asymmetrical canopies, defects, unbalanced loads **and** weakness in the stem or root plate are high risk for whole tree failure.....This is we differentiate - canopy defects **and** stem and root defects

Crowns and Branches (Page 15): most of the trees on Marine Ave have some type of branch defect. Poorly attached or overextended limbs is the most common.

- Lion Tailing is explained - foliage removed from interior of the crowns. Possible reasons as opposed to past pruning:
 1. We have experienced a number of broken interior branches in the past 20 years.
 2. Interior branches could have been removed due to them being dead or in decline.
 3. Interior branches could have been part of a structural pruning initiative to correct topping type pruning conducted through the 1980’s (previous to widespread adherence to ISA standards).

Root Conditions and Trunk Issue (Page 18):

- Past hardscape repairs- leaning trees from past root pruning. Continue to lean. Weight of tree is more than the root plate can support– PRIORITY.
- Trees covered with synthetic turf, causing wet soil – some showing potential crown rot or heartwood decay – PRIORITY.

Risk Categorization (page 24): 27 high-risk trees with multiple defects - possible that one or more of the 27 could experience partial or whole tree failure within 36 months. One tree is probable for root or trunk failure in next 36 month (Starbucks tree). - In terms of likelihood, probable is more likely than possible. The reason for the high-risk categorization is due to the consequences of failure, which in most cases would be severe.

Conclusions and Recommendation (Page 27): Our consultant is recommending 27 trees to be removed (now?) that pose a high risk and to re-evaluate the remaining 12 moderate rated trees in one year.

City Arborist Recommendation: *I agree that the 27 trees are in a high risk category for the potential to cause severe consequences from either whole tree failure or a large limb failure.*

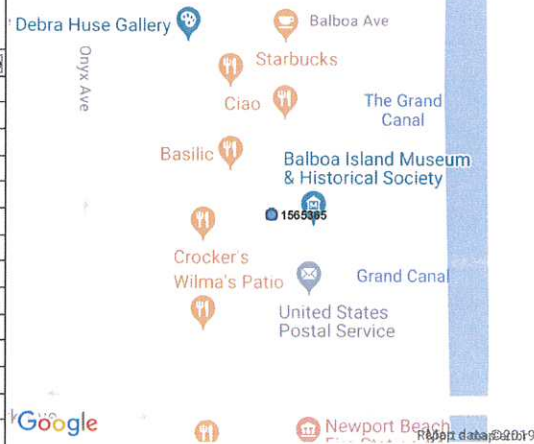

As a triage system in dealing with multiple high-risk trees, we propose the following:

1. Remove ten high-risk Eucalyptus trees this year (2019). Trees selected have significant defects in the canopy **AND** in the root system and trunk. One tree is dead.
 - **210 Marine Ave.** - Asymmetrical, co-dominant limbs, dieback, contact growth, suspected heartwood decay.
 - **220 Marine Ave.** - Asymmetrical, moderate decline, deadwood, Heartwood decay, visible root decay
 - **224 Marine Ave.** - Asymmetrical, co-dominant limbs, deadwood, significant leaning trunk, suspected heartwood decay, and heaving sidewalk/root plate.
 - **300 Marine Ave.** - 20% Live Crown Ratio, deadwood, history of limb failures, cavity in trunk, roots pruned, and heaving sidewalk.
 - **312 Marine Ave.** - Asymmetrical, poor overall health, significant leaning trunk, suspected heartwood decay, root pruning for sidewalk work.
 - **326B Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, poor overall health, and significant leaning trunk
 - **319 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, significant leaning trunk, root pruned/decayed, and heaving sidewalk.
 - **315 Marine Ave.** - Dead tree.
 - **301 Marine Ave.** - Asymmetrical, 15% Live Crown Ratio, deadwood, history of limb failures, Heartwood decay suspected, roots pruned/decayed, and heaving sidewalk.
 - **217 Marine Ave.** - 15% Live Crown Ratio, weakly attached, co-dominant limbs (past topping), poor overall health, cut and decayed roots.
2. Based on a reassessment, remove 19 high-risk Eucalyptus trees in the following two years (2020-2021). These primarily have significant defects in the canopy only, which would relate to a large limb failure (still severe) vs. a whole tree failure (more severe) per the above trees.
3. Evaluate 12 remaining moderate-risk Eucalyptus trees in 2021-2022.
4. Replacement tree species would be decided after recommendations from City Council.

Inventory Detail

Tree ID	3514492	Old Tag #		Save
District	14			
Area	14			
Address	301 MARINE AVE			
Side/Site	Front - 2			
Alt Address				
Tree Species	<i>Corymbia citriodora</i> / <i>Eucalyptus - Citriodora</i>			
Common Name	Lemon-Scented Gum			
Size	19-24			
Height	60+			
DBH				
Condition	FAIR			
Grow Space				
Space Size				
Overhead Utility				
Sidewalk Damage				
Note:				
Irrigation Flag	Yes	No		
Monitor Flag	Yes	No		
Service Type	Selective Limb Removal			
Season	NOV/DEC			
Estimated Value	\$6,080.00			
Next Date				

Latitude: 33.607187622 Longitude: -117.889855171 (edit)
