| Introduction .....                                                                                                           | 12 |
| XIV. Appendix D – Pavement Management Data Files.....                                                                        | 13 |
| XV. Appendix E – GIS Maps – Current Conditions (Optional).....                                                               | 13 |

### I. Pavement Management Plan Certification

The City of Newport Beach certifies that it has a Pavement Management Plan in conformance with the criteria stated in the Orange County Transportation Authority Ordinance No. 3. This ordinance requires that a Pavement Management Plan be in place and maintained to qualify for allocation of revenues generated from renewed Measure M (M2).

The plan was developed by City of Newport Beach\* using PAVER, a pavement management system, conforming to American Society of Testing and Materials (ASTM) Standard D6433, and contains, at a minimum, the following elements:

- Inventory of MPAH and local routes reviewed and updated biennially. The last update of the inventory was completed on January, 2021 for Arterial (MPAH) streets and January, 2021 for local streets.
- Assessment of pavement condition for all routes in the system, updated biennially. The last field review of pavement condition was completed on March, 2021.
- Percentage of all sections of pavement needing:
  - Preventative Maintenance: 0.5%
  - Rehabilitation: 11.0%
  - Reconstruction: 1.0%
- Budget needs for Preventative Maintenance, Rehabilitation, and/or Reconstruction of deficient sections of pavement for:
  - Current biennial period \$29.3 million
  - Following biennial period \$4.1 million
- Funds budgeted or available for Preventative Maintenance, Rehabilitation, and/or Reconstruction:
  - Current biennial period \$13.4 million
  - Following biennial period \$13.4 million
- Backlog by year of unfunded pavement rehabilitation, restoration, and reconstruction needs.
- The Pavement Management Plan is consistent with countywide pavement condition assessment standards as described in the OCTA Countywide Pavement Management Plan Guidelines adopted by the OCTA Board of Directors.

\*An electronic copy of the Pavement Management Plan (with Micro Paver or StreetSaver compatible files) has been, or will be, submitted with the certification statement.

A copy of this certification is being provided to the Orange County Transportation Authority.

## II. Executive Summary

NCE was selected by the City of Newport Beach to perform an update of the City's Pavement Management Program (PMP). The goal of this project is to update the PMP with current pavement conditions and to perform funding analyses to help inform and educate policy makers as well as to comply with the Orange County Transportation Authority's (OCTA) Measure M2 Program.

The 2021 PMP update includes an assessment of the entire MPAH pavement network via walking inspection method; local pavement network within Council Districts 1, 2, and 3 was also inspected via windshield inspection method. The assessment was completed in January of 2021 and result shows that the City's overall weighted PCI for the pavement network is 81, which is in the "Good" category. As a result, the City remains eligible for local agency match reduction of 10% per OCTA's requirement.

After the database was updated with maintenance activities that had occurred since 2019, pavement treatment policies were reviewed, and unit costs were updated. Three budget scenarios were run and the result shows the City's current annual funding level of \$6.7 million will meet OCTA's requirement of providing funding levels that would maintain existing average network PCI.

### III. Background (Optional)

The City of Newport Beach owns and maintains approximately 205.5 centerline miles of pavements, which includes 48.5 miles of the Master Plan of Arterial Highways (MPAH) streets and 157.0 miles of local streets, representing a total replacement cost of \$447.0 million.

The 2021 PMP update includes an assessment of the entire MPAH pavement network via walking inspection method and local pavement network within Council Districts 1, 2, and 3 was inspected via windshield inspection method. The assessment was completed in January of 2021. The database was also updated with maintenance activities that have occurred since the last update. In addition, pavement treatment policies were reviewed and unit costs were updated.

#### IV. Current Pavement Conditions (PCI)

| Current Network PCI | Current MPAH PCI | Current Local PCI |
|---------------------|------------------|-------------------|
| 81                  | 80               | 82                |

#### V. Projected Pavement Conditions (PCI)

Should be by projected PCI by year under existing or expected funding levels for next seven fiscal years (“Today” is before June 30).

| Fiscal Year | Current Funding (\$ million) | Entire Network PCI | MPAH | Local |
|-------------|------------------------------|--------------------|------|-------|
| Today       | \$6.7 million                | 81                 | 80   | 82    |
| 2021-22     | \$6.7 million                | 82                 | 83   | 81    |
| 2022-23     | \$6.7 million                | 82                 | 84   | 81    |
| 2023-24     | \$6.7 million                | 82                 | 85   | 80    |
| 2024-25     | \$6.7 million                | 82                 | 85   | 80    |
| 2025-26     | \$6.7 million                | 82                 | 84   | 81    |
| 2026-27     | \$6.7 million                | 83                 | 83   | 82    |
| 2027-28     | \$6.7 million                | 83                 | 82   | 83    |

## VI. Alternative Funding Levels

As discussed in the executive summary, the result shows that the City's current annual funding level of \$6.7 million will meet OCTA's requirement of providing funding levels that would maintain existing average network PCI.

### *Maintain Existing Average Network PCI*

| Fiscal Year | Funding Needed (\$ million) | Entire Network PCI | MPAH | Local |
|-------------|-----------------------------|--------------------|------|-------|
| Today       | \$6.7 million               | 81                 | 80   | 82    |
| 2021-22     | \$6.7 million               | 82                 | 83   | 81    |
| 2022-23     | \$6.7 million               | 82                 | 84   | 81    |
| 2023-24     | \$6.7 million               | 82                 | 85   | 80    |
| 2024-25     | \$6.7 million               | 82                 | 85   | 80    |
| 2025-26     | \$6.7 million               | 82                 | 84   | 81    |
| 2026-27     | \$6.7 million               | 83                 | 83   | 82    |
| 2027-28     | \$6.7 million               | 83                 | 82   | 83    |

### *Improve Average Network PCI*

| Fiscal Year | Funding Needed (\$ million) | Entire Network PCI | MPAH | Local |
|-------------|-----------------------------|--------------------|------|-------|
| Today       | \$6.7 million               | 81                 | 80   | 82    |
| 2021-22     | \$6.7 million               | 82                 | 83   | 81    |
| 2022-23     | \$6.7 million               | 82                 | 84   | 81    |
| 2023-24     | \$6.7 million               | 82                 | 85   | 80    |
| 2024-25     | \$6.7 million               | 82                 | 85   | 80    |
| 2025-26     | \$6.7 million               | 82                 | 84   | 81    |
| 2026-27     | \$6.7 million               | 83                 | 83   | 82    |
| 2027-28     | \$6.7 million               | 83                 | 82   | 83    |

VII. Current and Projected Backlog by Year of Pavement Maintenance Needs

| Fiscal Year | Current Funding Backlog (\$ million) | Maintain PCI Backlog (\$ million) | Increase PCI Backlog (\$ million) |
|-------------|--------------------------------------|-----------------------------------|-----------------------------------|
| Today       | 25.7                                 | 25.7                              | 25.7                              |
| 2021-22     | 19.1                                 | 20.1                              | 19.5                              |
| 2022-23     | 18.3                                 | 20.6                              | 19.2                              |
| 2023-24     | 16.5                                 | 20.2                              | 18.0                              |
| 2024-25     | 13.4                                 | 18.5                              | 15.4                              |
| 2025-26     | 10.2                                 | 17                                | 12.8                              |
| 2026-27     | 7.6                                  | 15.6                              | 10.7                              |
| 2027-28     | 4.8                                  | 14.7                              | 8.7                               |

VIII. Centerline Mileage

| Entire Pavement Network | MPAH | Local Roads |
|-------------------------|------|-------------|
| 205.5                   | 48.5 | 157.0       |

IX. Percentage of Network in Each of Five Condition Categories Based on Centerline Miles

| Condition Category | PCI Range | Network | Percent Area of Total Pavement | Area of Pavement (sf) | Percent Centerline Mileage of Network | Centerline Mileage of Network |
|--------------------|-----------|---------|--------------------------------|-----------------------|---------------------------------------|-------------------------------|
| Very Good          | 86-100    | MPAH    | 16.1%                          | 7,491,486             | 46.8%                                 | 19.8                          |
|                    |           | Local   | 29.8%                          | 13,782,506            |                                       | 76.3                          |
| Good               | 75-85     | MPAH    | 6.5%                           | 3,042,941             | 23.7%                                 | 8.5                           |
|                    |           | Local   | 16.0%                          | 7,437,737             |                                       | 40.3                          |
| Fair               | 60-74     | MPAH    | 11.2%                          | 5,227,505             | 20.1%                                 | 12.4                          |
|                    |           | Local   | 10.7%                          | 4,990,236             |                                       | 28.8                          |
| Poor               | 41-59     | MPAH    | 5.0%                           | 2,317,642             | 8.5%                                  | 7.2                           |
|                    |           | Local   | 3.8%                           | 1,767,454             |                                       | 10.3                          |
| Very Poor          | 0-40      | MPAH    | 0.4%                           | 177,030               | 0.9%                                  | 0.6                           |
|                    |           | Local   | 0.5%                           | 244,751               |                                       | 1.3                           |

## X. Reduction in M2 Local Match

A local agency match reduction of 10% of the eligible cost for projects submitted for consideration of funding through the M2 Comprehensive Transportation Funding Programs (CTFP) call for projects is available if the local agency either:

- a. Shows measurable improvement of paved road conditions during the previous reporting period defined as an overall weighted (by area) average system improvement of one Pavement Condition Index (PCI) point with no reduction in the overall weighted (by area) average PCI in the Master Plan of Arterial Highways (MPAH) or local street categories;

*or*

- b. Have road pavement conditions during the previous reporting period, within the highest 20% of the scale for road pavement conditions in conformance with OCTA Ordinance No. 3, defined as a PCI of 75 or higher, otherwise defined as in “good condition”.

If applicable, please use the space below to justify the local agency’s eligibility for a reduction in M2 Local Match based on the statement above.

The City of Newport Beach has met the criteria above by having an average weighted PCI of 81. This means the City continues to remain eligible for M2 funding.

## XI. Appendix A – Seven-Year Road Maintenance and Rehabilitation Plan Based on Current *or* Expected Funding Level

The seven-year plan for road maintenance and rehabilitation should be based on current and projected budget. Street sections selected for treatment should be identified here. Specific data to be submitted should follow the format below:

| MPAH        |                |    |                   |                  |               |                   |                   |                   |
|-------------|----------------|----|-------------------|------------------|---------------|-------------------|-------------------|-------------------|
| Street Name | Limits of Work |    | Length of Segment | Width of Segment | Pavement Area | Type of Treatment | Cost of Treatment | Year of Treatment |

### XIII. Appendix C – Quality Assurance/Quality Control Plan

#### *Introduction*

When performing data collection in any field, the need for quality control is paramount as it is essential for accurate planning, analysis and design. This is particularly true for collecting pavement distress data for a pavement management system.

The Quality Assurance/Quality Control (QA/QC) Plan establishes minimum quality standards for performance and procedures for updates of the pavement management system.

If applicable, utilize the space below to include information on the agency's QA/QC policies:

## 1. Introduction

The need for quality control is paramount when performing data collection in any field, as it is essential for accurate planning, analysis, and design. NCE's *Quality Assurance Management Plan* (QAMP) affirms that:

*NCE is dedicated to achieving technical and management excellence and to delivering professional engineering and environmental services that meet or exceed our clients' needs. NCE's Quality Assurance/Quality Control (QA/QC) Program is designed to achieve these goals. This QA Management Plan (QAMP) describes NCE's QA Program, which is based on four principles: client satisfaction, employee participation, problem prevention, and continuous quality improvements.*

NCE's QAMP establishes minimum quality standards for performance and procedures for assuring that our clients receive quality service. It requires the participation of employees at every level. It encourages Project Managers and technical staff to take pride in their work and to assume responsibility for ensuring that the work is done correctly the first time. The QAMP is designed to reduce the incidence of quality-related and, where necessary, results in corrective actions and modification of work procedures to minimize the incidence of future problems.

NCE has also prepared detailed and specific quality control plans (QCPs) for projects; the most notable example is for the **Long Term Pavement Performance (LTPP) – Western Regional Support Contract** for the Federal Highway Administration. This is a 150-page document that covers data collection on highways, including deflection, profile, pavement distresses, traffic, maintenance and rehabilitation history, materials testing and sampling as well as document control.

### 1.1. Objectives

This document constitutes a formal QCP for the City of Newport Beach. It was prepared on December 15, 2020 and last revised on January 1, 2021. The QCP focuses on data collection issues as part of the pavement management update. Specifically, it is intended for the 2021 Pavement Management Update. The focus is on the collection of network-level pavement distress data. As defined by the National Cooperative Highway Research Program Synthesis 401 *Quality Management of Pavement Data Collection*, "Network-level data collection involves collection of large quantities of pavement condition data, which is often converted to individual condition indices or aggregated into composite condition indices."

### 1.2. Structure

The following components are addressed in this QCP:

- Condition inspection procedures,
- Data collection accuracy requirements,
- Inspector qualifications and experience, and
- Safety procedures.

## 2. Quality Control Plan

### 2.1. Condition Inspection Procedures

The governing document for performing condition surveys for the City of Newport Beach is ASTM D6433-16, “*Standard Practice for Roads and Parking Lots Pavement Condition Index (PCI) Surveys.*” Both asphalt concrete (AC) and Portland cement concrete (PCC) pavements are included in this protocol. The following distresses are collected for each pavement type.

#### AC Pavements

1. Alligator (fatigue) cracking
2. Bleeding
3. Block cracking
4. Bumps and sags
5. Corrugation
6. Depression
7. Edge cracking
8. Joint reflection cracking
9. Lane/shoulder drop-off
10. Longitudinal and transverse cracking
11. Patching and utility cut patching
12. Polish aggregate
13. Potholes
14. Railroad crossing
15. Rutting
16. Shoving
17. Slippage cracking
18. Swelling
19. Raveling
20. Weathering

#### PCC Concrete (Jointed) Pavements

1. Blowup/buckling
2. Corner breaks
3. Divided slab
4. Durability (“D”) cracking
5. Faulting
6. Joint seal damage
7. Lane/shoulder drop-off
8. Linear cracking
9. Patching (large) and utility cuts
10. Patching (small)
11. Polished aggregate
12. Popouts
13. Pumping
14. Punchout
15. Railroad crossing
16. Scaling, map cracking, and crazing
17. Shrinkage cracks
18. Spalling (corner)
19. Spalling (joint)

Any exceptions to the ASTM procedures will be discussed with the City before any inspections are performed. Exceptions are usually related to distresses or situations that are not covered in the manuals. Examples include slippage cracks, roller check marks, or edge cracking on streets with no curbs and gutters. Others include the raveling of surface seals or surveying the open-graded AC mixes. Any modifications will be documented and submitted to the City for approval.

Distress survey on arterial and collector streets were performed as walking inspection, while survey for residential and alleys were performed as windshield inspection. A minimum 10% sampling rate is utilized. Field crew is typically a certified technician for lower-volume roads and additional technicians will join the inspection team when surveying on higher-volume facilities such as arterials. The sample units for this project will be based upon the length and

width of the street sections. This data will be collected to match the existing management sections of PAVER™.

## **2.2. Data Collection Accuracy Requirements**

The accuracy required for data collection has two components, both of which are further described in the following paragraphs.

- Re-inspections
- PCI comparisons with past inspections

### **2.2.1 Re-Inspection “Check”**

At least 5% of all inspections are randomly re-inspected by other team members. A different inspector will review these sites and determine the revised pavement distress measurements. If the initial inspection is determined to be inaccurate, the original inspector is given refresher training before being allowed to continue with any further inspections. Should the data be inaccurate for a certain day, all the data for that day will be re-inspected following refresher training to ensure accuracy.

### **Acceptability Criteria**

At the time of re-inspection, the actual distresses will be re-inspected and verified, and any corrections made, if necessary. Distress types and severities must be the same and re-measured quantities must be within  $\pm 10\%$  of the original measured quantity.

If corrections are required on more than 10% of the re-inspected sample units, then an additional 5% will be re-inspected. This will continue until more than 95% of the re-inspected sections meet the acceptability criteria.

### **2.2.2 PCI Comparisons with Past Inspections**

As another level of quality control, the new PCIs are compared with the previous PCIs. If they differ by more than  $\pm 10$  PCI points, these sections are automatically flagged for further investigation.

### **If PCI Increases 10 points:**

The section is investigated to see if maintenance and rehabilitation (M&R) activities have been performed since the last inspection, but have not been recorded. This can only be resolved with feedback from the City. Typical M&R activities that may have occurred include:

- Crack sealing – changes medium- or high-severity cracking to low-severity.
- Patching – alligator cracking has been removed and patched, so that the resultant PCI is increased.
- Surface seals.

- Overlay.

Therefore, an up-to-date M&R history file in the PAVER™ database is desirable, both for historical accuracy as well as to provide additional quality control.

### **If PCI Decreases 10 points:**

The section is checked to see if the average deterioration rate (usually 3 to 4 points per year) is exceeded. If the drop in PCI is within the acceptable range, no further action is required. If the drop is more than the acceptable range, a re-inspection will be performed. The default performance curves in the pavement management software form the basis for acceptability.

## **2.3. Inspector Qualifications and Experience**

All NCE's inspectors are required to attend formal training on condition distress inspections. For example, any of NCE's inspectors working on the LTPP project are required to attend a week-long training workshop every year to maintain their certifications. The Regional Transportation Commission (RTC) of Washoe County requires inspectors to be calibrated prior to performing any work using the ASTM D6433 protocols (also known as the pavement management inspections).

For pavement management (or ASTM D6433) inspections, NCE's technicians underwent the Orange County Transportation Authority technician certification exercise held in January 2021.

Similarly, in agencies that use the StreetSaver® system, NCE's inspectors attend the distress training conducted by the Metropolitan Transportation Commission (MTC). After the formal training, technicians work with an experienced inspector before they are allowed to work on their own. Within the first month of working on their own, up to 20% of their work is checked weekly. Any necessary corrections are made immediately.

Finally, NCE conducts a one-day training and calibration workshop for all NCE staff involved with data collection. This is conducted once a year. The following table lists the inspectors assigned to this project and their most recent training date.

| <b>Inspector Name</b> | <b>Date of Distress Training</b> | <b>Training Conducted by:</b> |
|-----------------------|----------------------------------|-------------------------------|
| <b>Joseph De Leon</b> | January 2020                     | Lisa K. Senn                  |
| <b>Franc Escobedo</b> | January 2020                     | Lisa K. Senn                  |
| <b>Katrina Cai</b>    | January 2020                     | Lisa K. Senn                  |
| <b>Farhang Jalali</b> | February 2021                    | Lisa K. Senn                  |

Resumes of technicians utilized on this project are included in Appendix C1.

### 3. Safety Procedures

NCE administers a health and safety program in compliance with the Nevada Occupational Safety and Health Act (Section 618.383) and California Occupational Safety and Health Administration (OSHA) Title VIII, Section 3203. The program is documented in NCE's *Workplace Safety Program Manual*, which can be provided upon request.

Generally, the safety procedures include:

- Inspectors to wear a Class 2 safety vest at all times.
- Flashing beacons are placed on all vehicles utilized for inspections.
- Stopped vehicles are to be parked at locations away from moving traffic (nearby parking, shoulders etc.).
- For higher volume streets, inspectors will use the sidewalk and or medians, and move in the face of traffic when conducting survey. This will furnish them with more time and provides them with better chances in escaping a dangerous situation involving incoming vehicles.

On streets where there is a high volume of traffic or high speeds, additional measures may be necessary, such as:

- Inspections occur during off-peak periods or on weekends.
- An additional inspector attends to watch out for traffic.
- Traffic flaggers are provided in extreme cases.

In extreme cases where it is not possible to walk on the pavement surface, inspections will be performed from sidewalks or raised medians. However, this is extremely rare for city or county roads/streets; this is most often encountered on state highways, and lane closures are the most likely option in that circumstance.

All NCE inspectors are required to take online safety programs annually as administered by "Click Safety." These classes include:

- C2 Cal Personal Protective Equipment R2.
- G2 Cal/OSHA Heat Illness Prevention.
- G2 Cal/OSHA Heat Illness R2.

# **Appendix C1**

## **Resumes of Field Inspectors**

## Franc Escobedo

### Engineering Field Technician

Franc has over 21 years of experience as a pavement management technician for NCE. He has performed numerous pavement condition inspections throughout California, Idaho and Washington. His experience includes distress collection across various Pavement Management Systems, including the Metropolitan Transportation Commission StreetSaver, PAVER, Cartegraph, and Hansen systems.

Additionally, Franc has completed both the OCTA PAVER and MTC “Distress Identification” courses for both Asphalt Concrete and Portland Cement Pavements and now assists with the training of agency staff on both courses.

Franc performs all activities relating to pavement data collection using hardcopy forms or tablets. As part of the quality control process, he performs cross-checks of data in the PMS database. He regularly performs quality control checks of field collected data and pavement maintenance history to ensure that PMS databases are accurate and up-to-date. During this process, he generates detailed reports that are necessary to perform his cross-checks of the collected data.

His field experience and expertise are added benefits to agencies during field training. Listed below are a collection of agencies for which Mr. Escobedo has performed condition inspections – they total over 6,000 centerline miles of roads and streets.

|  Encinitas         |  Palm Springs     |  Walnut Creek      |
|  Fremont           |  Redwood City     |  West Covina       |
|  Fullerton         |  San Clemente     |  West Sacramento   |

Projects included various forms of inspections for pavement distress data collection, such as walking, windshield, and/or semi-automated.

## Joseph De Leon

### Field Technician

Joseph joined NCE in 2017 as a pavement management technician and is experienced in collecting distress data for pavement management systems. Apart from conducting field inspections, he has performed all functions related to data collection and is an active participant in the quality control process. As part of this process, he performs cross-checks of data in the PMS database. Joseph has performed quality control checks of field collected data and pavement maintenance history to ensure that PMS databases are accurate and up to date. During this process, he generates detailed reports, needed to help perform his crosschecks of the data collected.

## Representative Projects

### Pavement Asset and Management

#### Pavement Condition Surveys

*Various Cities and Counties, CA*

Field Technician. Listed below are a collection of agencies that he has performed condition inspections. Projects included various forms of inspections for pavement distress data collection, such as walking, windshield and/or semi-automated.

-  Buena Park
-  El Cajon
-  Elk Grove
-  Fairfield
-  Garden Grove
-  King City
-  Lake County
-  Martinez
-  Newport Beach
-  Oakland
-  Pacific Grove
-  San Clemente
-  Sand City
-  Santa Ana
-  Santa Cruz County
-  Sonoma County
-  South Gate
-  Stockton
-  Thousand oaks
-  Torrance
-  Ventura

## Katrina Cai – Staff Engineer, EIT

Ms. Katrina (Meiling) Cai joined NCE upon graduation and has since performed pavement condition inspections throughout California, as well as sidewalk and curb ramp assessments, pavement management budget analyses using both PAVER and StreetSaver software. In addition, Ms. Cai has served as the Staff Engineer for Orange County project since 2017. As part of the Orange County project, Ms. Cai covered the City of Dana Point on 2017 and 2019 PMP updates which included the OCTA M2 Eligibility PMP Submittal Template.

## Representative Projects

**Citywide Sidewalk Assessment, City of Carson, CA.** Field Technician. NCE inspected sidewalks and curb and gutter distresses on approximately 203 centerline miles of streets using distress criteria developed in consultation with the City. The primary emphasis of the assessment was to identify tripping hazards resulting from damage to sidewalks, curbs and gutters, as well as to identify locations with previous repairs. Locations where the sidewalk stopped or was discontinuous were noted. This assessment included reviewing ADA compliance for the curb ramps.

**Sidewalk and Curb Ramp Assessment, City of Corona, CA.** Field Technician. NCE performed condition assessments of approximately 350 centerline miles of sidewalks and 9,000 curb ramps. In addition, NCE provided prioritization criteria as well as repair recommendations.

### Pavement Management Inspections

Engineering Field Technician. Ms. Cai is responsible for pavement condition inspections on both arterial and residential streets, PCI calculation, imported M&R history records and reviewed M&R strategies, linked the database to GIS, performed City staff training and provided technical support. Her clients include the following cities and counties:

|                                 |               |                 |
|---------------------------------|---------------|-----------------|
| Ada County Highway District, ID | El Cajon      | Manhattan Beach |
| Chula Vista                     | El Central    | Novato          |
| Corona                          | La Habra      | West Covina     |
| Davis                           | Laguna Niguel | Whittier        |

### Pavement Management System Update

Staff Engineer. Ms. Cai performs the tasks of quality control of pavement distress data, database converting between softwares, zone setup in database, updating the City's decision tree, conducting budget analysis and summary reports. Her clients include the following cities and counties:

|                       |               |             |
|-----------------------|---------------|-------------|
| Bell                  | KCAG          | Seal Beach  |
| Buena Park            | Lake Forest   | Stanton     |
| City of Orange        | Lemon Grove   | Temple City |
| City of Santa Barbara | Mission Viejo | Torrance    |
| County of Orange      | San Dimas     | Yorba Linda |
| Dana Point            | San Gabriel   |             |

### Education

BS, Civil Engineering,  
University of California,  
Irvine, 2014

### Registrations/Certifications

Engineer-in-Training – Civil,  
CA #161501  
Pavement Management  
Training Levels 1 & 2, 2017  
MTC StreetSaver® Rater  
Certification Program  
OCTA PAVER Certification  
program

### Years of Experience

5 years

## Farhang Jalali, Ph.D.

### Staff Engineer

Mr. Jalali recently graduated with his Ph.D. in civil engineering with an emphasis in pavement technology from Auburn University in Alabama. Mr. Jalali's dissertation focused on pavement preservation performance modeling. He is a civil engineer with consulting experience in land development, road geometric and pavement design, design of retaining walls and drainage systems. His experience in pavement research includes working in mix design, mixture and binder testing, distress data collection, data processing and analysis as well as report writing and presentation. Farhang has implemented advance statistical concepts for the research works in programs such as SAS, SPSS, R. Also, he has coding experience using VBA, MATLAB and Python.

### Representative Projects

Farhang has been involved in both research and industry projects related to pavement preservation, asphalt binder modification, material characterization, pavement management, land development, road and railway design. Some of the projects include:

-  Pavement preservation performance modeling (pooled fund study TPF-5-375)
-  Developing a new optimization technique for pavement management systems (Auburn University)
-  Reassessment of the Bending Beam Rheometer (BBR) testing temperature (Auburn University)
-  Binder modification using Nano materials (research project)
-  Several land development, road and railway design, pavement design and analysis, and drainage system design projects in Iran

### Pavement Preservation Performance Modeling

#### National Partnership to Determine the Life Extending Benefit Curves of Pavement Preservation Techniques (MnROAD/NCAT Joint Study)

*Departments of Transportation of Alabama, Arkansas, Colorado, Georgia, Illinois, Kansas, Kentucky, Maryland, Michigan, Minnesota, Mississippi, Missouri, New York, North Carolina, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas, Wisconsin and West Virginia, as well as FHWA and FP2 Inc.*

Research Assistant. Farhang supported the \$3.3 million nation-wide pavement preservation pooled fund study TPF-5(375) as a principal data analyst. He developed much needed performance curves for pavement preservation treatments. Farhang performed data-driven pavement forensic studies applied on NCAT's preservation sites located on a low-volume road, Lee Road 159, and a high-volume road, US-280. As part of the project, he developed advanced automation techniques to improve work efficiency where sizable repetitive tasks are needed to be handled on a regular basis; as a case in point, automation of crack mapping which is implementable in a hassle-free overnight operation. He worked with large datasets pertaining to NCAT-MnROAD partnership preservation study.

### XIV. Appendix D – Pavement Management Data Files

The Pavement Management data files shall be submitted to OCTA in spreadsheet format. This must include the following information:

- Street name and limits for all public streets
- Street identifiers (Branch ID, Section ID)
- Direction (if applicable)
- Beginning and ending of each section
- Length, widths, and true areas
- Functional Classification (MPAH, Local)
- Number of travel lanes
- PCI and date of inspection
- Type of recommended treatment
- Cost of recommended treatment

The Pavement Management data files are attached here as a CD, or included as Appendix D

### XV. Appendix E – GIS Maps – Current Conditions (Optional)

If included, attach and label Appendix E.

#### PCI Ranges

- 0 - 40 (Very Poor)
- 41 - 59 (Poor)
- 60 - 74 (Fair)
- 75 - 85 (Good)
- 86 - 100 (Very Good)
